

SAFEBOARD™

SAFEBOARD™ OSP-X OVERHANG SUPPORT PANEL - EXTRA STRENGTH

THE NEXT GENERATION OF OVERHANG SUPPORT IS HERE

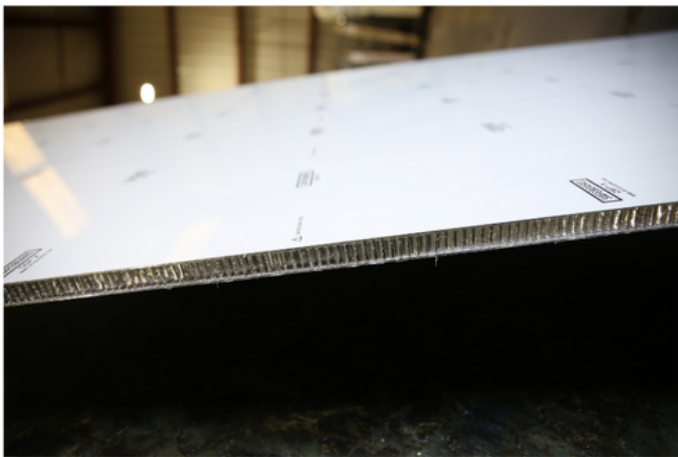

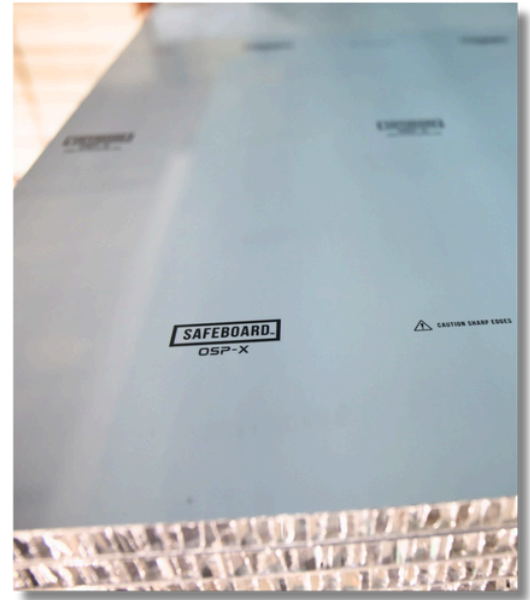

SAFEBOARD™ OSP-X (Overhang Support Panel - Extra Strength) is the new and improved version of SAFEBOARD™ OSP. OSP-X has the following benefits:

- All the same benefits as regular OSP such as...
 - Water and Moisture Resistant
 - Lightweight
 - Rigid and Durable Aluminum
 - Safe and Sanitary
- **New and improved** benefits including:
 - Denser honeycomb structure
 - Can support heavier loads
 - Allows up to 25% longer unsupported countertop overhangs

OSP-X is carefully designed to provide the strongest countertop overhang support in the market.

SAFEBOARD™ OSP-X can support up to 25% longer unsupported overhangs than regular OSP. This means that at the same thickness of 5/8", regular OSP can support up to a 16" unsupported overhang, while OSP-X can support up to a 20" unsupported overhang. With SAFEBOARD Edge Caps installed on the edges, OSP-X can even reach up to a 24" unsupported overhang. The compressive strength, tensile strength, and bending strength of OSP-X are all improved from regular OSP.

OSP-X is designed for those who are looking for the longest achievable countertop overhang without any additional support.

AVAILABLE SIZES

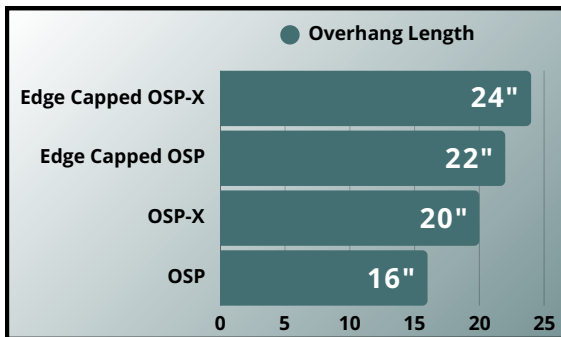

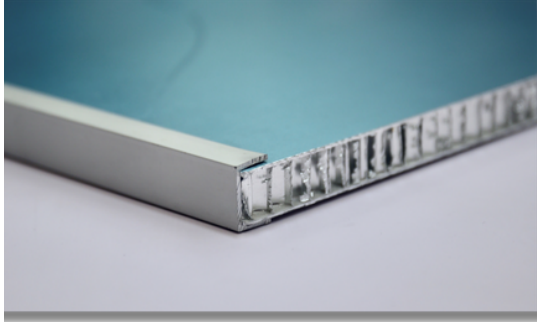

4' x 8' x 5/8"

4' x 10' x 5/8"

SAFEBOARD™

SAFEBOARD™ OSP-X and Edge Caps

SAFEBOARD™ Edge Caps are aluminum U-channels specifically designed for use with SAFEBOARD™ OSP and OSP-X. Edge Caps serve two main purposes:

- Protect exposed aluminum honeycomb edges
- Add additional strength to overhangs

When Edge Caps are installed on the edges of an OSP-X, the panel can achieve a longer overhang. Edge Caps create a thick frame around the panel, preventing flexion in all axes. Add Edge Caps to your installation for both structural support, and a smooth, sleek aesthetic.

Edge Caps are also available in custom shapes and sizes for more specialized projects. Visit safeboardpro.com for more information about our custom SAFEBOARD™ Project Edge Caps!

SAFEBOARD™ OSP SCREWS

SAFEBOARD™ OSP Screws are specifically designed for use with SAFEBOARD™ OSP and OSP-X. SAFEBOARD™ OSP Screws feature a modified low profile truss head star drive with a tight star recess that holds the included bit firmly in place. Standard construction screws are often over-torqued, which can damage the aluminum cell. SAFEBOARD™ OSP Screws securely fasten OSP-X to base material with high strength and no damage to the panels. Using SAFEBOARD™ OSP Screws with SAFEBOARD™ OSP-X is highly recommended.
